QUESTIONS FOR THE CUSTOMER

Week 3 validation meeting

A beginner to intermediate runner with only a phone hears what to do and how the run is going while they are running, without looking at the screen.

The meeting has to settle whether the finished stories do what the customer needs, and what comes next. A star marks a question that would change the project most. For each story, take the two criterion verdicts before the starred question.

Permission

Send nothing else until these three are answered.

1. May we record this meeting?

[ ] Yes [ ] No Notes

2. May we publish a sanitized transcript in the repository?

[ ] Yes [ ] No Notes

3. If you refuse publication, may we share that transcript privately with the instructors?

[ ] Yes [ ] No Notes

US-01 Start and stop without taking the phone out

Shown first: headphones on, screen covered, a session started and then stopped, each with a spoken confirmation, and silence after the stop.

AC-01. With the phone in a pocket, the runner starts a session and hears a spoken confirmation, and the phone face stays covered. Does this hold?

[ ] Yes [ ] No

AC-02. The runner stops that session and hears a spoken confirmation, and no further cue is spoken as if the session were still going. Does this hold?

[ ] Yes [ ] No

4. * Does the start and the stop do what you need: a spoken confirmation each time, and silence after the stop, with the phone face covered?

Answer

US-02 Hear time, pace, and distance

Shown first: one session with no location fix, then one with a distance, and no look at the screen for either number.

AC-01. On a phone with no watch, during a session, the runner hears the elapsed time, the pace, and the distance at least once within three minutes, and does not look at the phone to get them. Does this hold?

[ ] Yes [ ] No

AC-02. If the session has no distance yet, the runner hears that distance is missing rather than a made-up distance. Does this hold?

[ ] Yes [ ] No

5. * Are the spoken time, pace, and distance enough, including the case where distance is missing and we do not invent one?

Answer

US-03 Hear the effort

Shown first: an interval session that says Jog, then Hard, then Easier, and a steady session that says none of those.

AC-01. During a session that has a change of effort, the runner hears hard, easier, or jog at the change, without looking. Does this hold?

[ ] Yes [ ] No

AC-02. During a session with no change of effort, the runner is not told to change effort. Does this hold?

[ ] Yes [ ] No

6. * Is hearing hard, easier, or jog at a change, and hearing nothing when the effort does not change, the cue you wanted?

Answer

US-04 Ask aloud how the run is going

Shown first: "How long have I been running?" answered with the elapsed time, then a question that is not time, pace, or distance, with no invented stat.

AC-01. While a session is going, the runner asks aloud how long it has been going and hears the elapsed time, without looking. Does this hold?

[ ] Yes [ ] No

AC-02. A spoken question that is not about the current run's time, pace, or distance gets no invented stat. Does this hold?

[ ] Yes [ ] No

7. * When you ask how long the run has been going, is the spoken elapsed time the answer you wanted, and is it right that any other question gets no invented stat?

Answer

Not in this build

US-06 stays out of the Week 3 build. The two presets are a steady run and a hard/easy interval, and they still wait until after the coach.

8. * Do the two presets still follow this coach, or do they leave the plan?

Answer

Still open from Week 2

9. * The last time an app or a plan changed a workout on you, what did you do: follow it, ignore it, or change it back? Why?

Answer

10. Are professional runners in scope later?

Answer

11. What does a wearable add for you, and should we spend any of the remaining weeks on one?

Answer

12. If only one of these had shipped, which would you have kept, the explanation of why a plan changed, or adaptation from phone-only runs? Both are already outside the product. We are asking whether that still stands.

Answer

Read-back

State what we think was settled, and let the customer correct it.
